**PC★MILER** ®

Get up to speed with the latest version

When every mile matters, you need to ensure your transportation operation are rooted in the most comprehensive commercial road network with tool that generate the most precise miles, drive times, ETAs, and route costs. **Here's what's new:**

Hours of Service planning for team drivers

HOS calculations for team drivers can now be factored into route plans. Input the available driving hours for two drivers, and the HOS Manager will calculate break times for each.
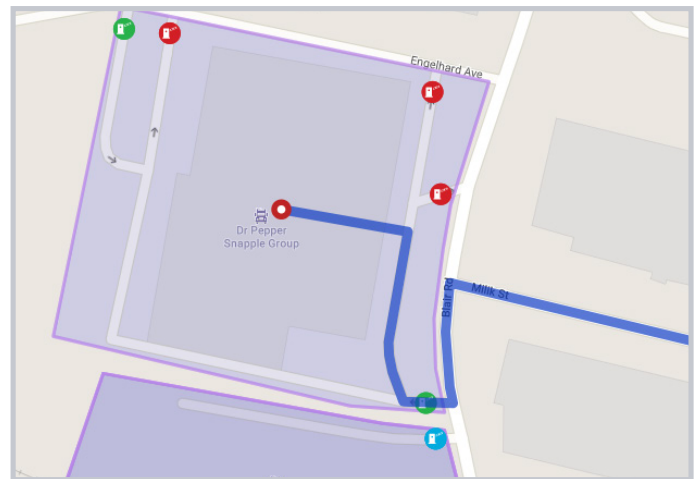

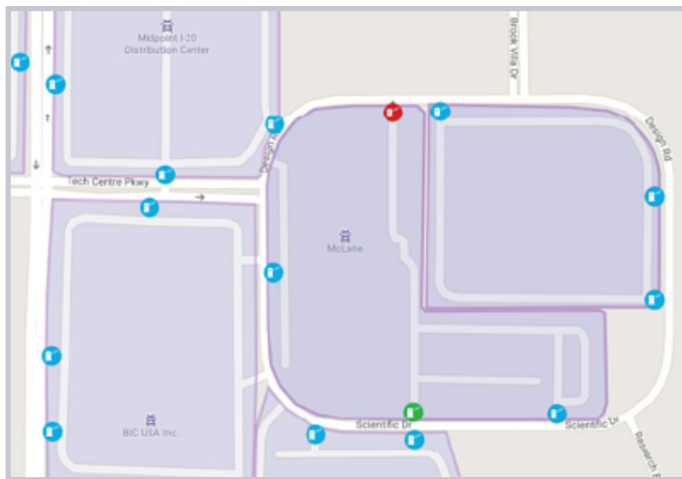

Automate departure time for real-time routing information

The Arrival/Departure time used in route calculations and ETA can be set by default to Now. This avoids the need to reset it every time a route is generated.

Updated maps and miles

We ensure new roads are added, changes to existing roads are updated, and all roadway attributes (including restrictions and allowances) and are up to date and verified.

New and enhanced Places with truck entry and exit gates

We've verified and predefined over 65,000 commercial locations that you go to everyday, like distribution centers, manufacturing facilities and truck stops, with specific entry and exit gates so that when you route, you'll get to the right place, the first time.

▶ Accurate mileage and drive times

▶ Precise turn-by-turn driving directions

▶ Improved ETA prediction

Our dedicated team of GIS engineers validate all location data using the latest imagery technology and data sources.

Which PC*MILER is right for you?

»MILEON™
BY ◆PC◆MILER®

Network Desktop Install
Robust back office software for mileage, routing, accounting, and operations.
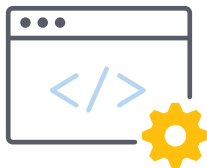

Ideal for larger fleets who require local or network installation

Basic Web-Based Version
Routing and reporting starting as low as $39.95/month per user.

Ideal for small fleets, owner/operators, and brokers

Integration APIs
Integrate features and data within third party applications.

Ideal for solution providers for fleets with custom desktop or web-based solutions

TMS

Through a TMS or ERP
We partner with the leading system providers to get PC*MILER features and data to customers.
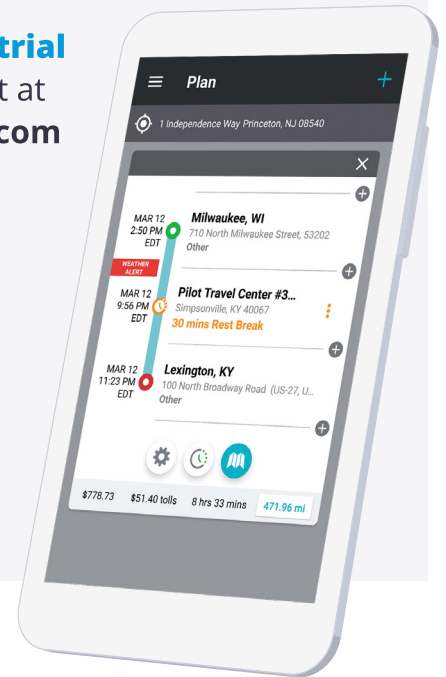

pcmiler.com/partners

You can plan precisely, but you can't always control what happens on the road. But, by giving your drivers the tools that help them plan efficiently – and connect that data with the back office – you can:

- ✓ Get visibility into trip exceptions, like delays or out of route events

- ✓ Improve asset utilization with data driven future load planning based on actual ETAs

- ✓ Retain drivers with tools that help them find break locations with amenity information, like parking, showers, and fuel

Powered by PC*MILER, you'll feel confident that drivers will plan trips using the same, compliant commercial vehicle data used in the back office.
