PC★MILER®

Routing, mileage & mapping software that drives the **transportation industry**

Severe Thunderstorm Warning Alert

HOS Break

Operate on the industry standard mileage for driver pay and rate negotiation

Plan with precise drive times and ETAs with real-time and predictive traffic congestion based on actual road speeds

Keep drivers safe on truck legal roads and incorporate Hours of Service breaks for compliance

Proactively avoid delays, re-route drivers, and notify customers of potential impacts with real-time weather alerts

Generate detailed reports for fuel tax reporting, accounting, and post trip analysis

Drive business wide consistency through integrations with leading TMS and fuel optimization providers

Proprietary Maps Built for Commercial Vehicles

8 million
Miles of street-level roadway

800,000
Miles of roads with height, weight, and load restrictions

1 million
ZIP/Postal codes

12,000
Truck-specific POIs including truck stops, rest areas, and fueling locations

Use precise data to generate accurate miles, costs, drive times, and ETAs and keep your business moving forward.

Address based routing to improve distance results, eliminate unknown miles, and save time on the road

Commercial vehicle restrictions based on truck dimensions, road classifications, or load type to avoid fines and accidents by keeping vehicles on safe, legal roads

Hours of Service Manager planning tool to incorporate break times and stop durations directly in the route plan for regulatory compliance

Real-time and predictive traffic congestion for precise drive times and ETAs to improve asset utilization and avoid potential delays

View radar and road surface conditions, as well as receive proactive weather advisory alerts in the route plan to make critical safety and re-routing decisions

Understand the true cost of a lane with toll fees itemized and tallied for each route; then, compare mileage and toll costs to determine the most effective trip plan for your business

Quickly add truck-specific POIs along the route, including fuel stops with current diesel pricing, to control costs and maximize time

Route on safe, compliant roads when hauling hazardous materials to avoid fines and reduce driver and public safety risks

Geocode, import, and save custom places, as well as set avoids/favors on certain roads, for customized routing
