

PC*MILER 25

PC*MILER | Streets is street-level routing, mileage and mapping.

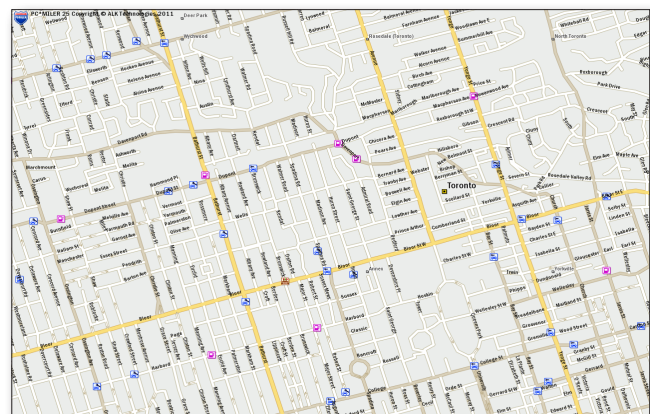

PC*MILER | Streets is street-level routing, mileage and mapping that provides dock-to-dock driving directions over truck-specific routes. It includes all the features and functionality of PC*MILER with an enhanced U.S. and Canadian street-level routing network, map database and street address database.

- U.S. and Canadian truck-specific street-level routing, mileage and mapping for heavy and light vehicles
- Proprietary map database updated annually (quarterly updates available for select products*)
- Generate routes for light and heavy vehicles by entering a vehicle's Height, Length, Width, and Weight (Maximum values are H 13' 6"; L 53'; W 120" or more; Weight 132,000 lbs.)
- Store custom vehicle profiles to keep route settings consistent for a particular vehicle type
- Manually override truck restricted roads for flatbed or light delivery vehicles
- Optimize routes by resequencing an unlimited number of stops within a route
- Generate truck-specific driving directions and state/county mileage summaries
- Use the Comparison Report to compare different routes or the effect of different routing options on a route

*Applicable licenses required. Please contact PC*MILER Sales for more information.
