PC★MILER® Rail 25

Release Notes

Map Data Update
Version 25.1 | March 2019

Table of Contents

General Information

Overview

Between version releases of PC*MILER|Rail, updates and patches are periodically made available. These may include corrections to reported errors in the software or access to newer data releases[1].

This document provides information on the following release:

Release Type:	**Map Data Update**
Product/Version Availability[2]:	**PC*MILER|Rail 25**
Data Set Name:	**Version 25.1**
Data Version:	**25.0.0.49**
Date of this Release:	**March 2019**

---

[1] For applicable products and license types.

[2] If a PC*MILER|Rail installed-based product was purchased along with our Annual Support & Update Program (an AUP license purchase), customers are entitled to use PC*MILER|Rail during the term of their agreement as well as to receive data updates when and if available. Otherwise, PC*MILER|Rail is purchased as a Perpetual license. For more information on upgrading a Perpetual license to an AUP license, please contact a PC*MILER Account Executive at 800-377-6453 ext. 1 or go here.

How to Install/Access the Update

PC*MILER|Rail Installed-based Users

If you have an installed product version of PC*MILER|Rail, the software comes equipped with an updater tool to initiate a download and install of software patches and updates. To access this feature, use the following steps below.

> **NOTE:** This feature requires an active Internet connection.

> **NOTE:** Installing this map data update won't overwrite the existing map data released with the initial launch and shipment of PC*MILER|Rail 25, referred to as the "25.0_ Base" data set. Instead, the update data set – referred to as the "25.1_Update" data set – is installed separately and activated by default in the Map > *Change Data Set* menu. You may want to keep the base data set active or stay up-to-date by using the latest data set. See *Accessing the Update Data Set* section below for more information.

1. **Close all open instances of PC*MILER|Rail** and its connectivity products. If a third-party program that accesses any PC*MILER|Rail component is running (for example, PC*MILER|Rail-Connect), it must be closed before updating.

2. Confirm the computer has an active Internet connection.

3. Open PC*MILER|Rail again, then select **Help** > ***Check for Updates***. After a few moments, the PC*MILER Updater window is displayed. The Updater first checks for valid license information and then begins checking for available updates.

   ➢ **If no updates are listed** in the *Available Updates* window, PC*MILER|Rail is up-to-date. Stop here and close the Updater window.

   ➢ **If updates are listed** in the *Available Updates* window, use the remaining steps below to update PC*MILER|Rail.

4. In the Download & Install drop-down menu next to each available update, select either ***Download & Install*** to download and install right away, or ***Download*** to download now and install later. Selecting either option will begin the download process. The progress of the download will be displayed in a progress bar.

   ➢ **If *Download & Install* was chosen**, the InstallShield Wizard will open when the download is finished. Follow the instructions to complete the installation. After installing, the update is listed under "Installed Updates" in the Updater window.

- ➢ **If _Download_ <u>was chosen</u>**, the button to the right will say "Install" when the download is finished. The installation can be completed as described above at any time in the future by opening the Updater window and clicking _Install._

5. As a last step, confirm that the desired map data set is selected in the **Map** > _**Change Data Set**_ menu – see _Accessing the Update Data Set_ section below.

Updating Workstation Installations: Data updates are not required on workstations if the workstation is setup with Default Network Settings. Otherwise, follow the steps above to install updates on the server. Next, to keep all workstations in sync with what is running on the server, run the Updater (**Help** > _**Check for Updates**_) on each workstation to install the same updates or patches.

Accessing the Update Data Set in PC*MILER|Rail

After the update data set is installed, open PC*MILER|Rail and select Map > _Change Data Set_ to confirm the version of the map data that PC*MILER|Rail will use to calculate routes. The currently loaded data set will be selected. Ensure that _Rail 25.1_ is selected to access the new updates available with this release.

Release Information

Summary of Updates – Version 25.1

Data Set Name	**Version 25.1**
Map Data Version	**25.0.0.49**
